

Runtime

By Dan Lavine and Zachary Auerbach

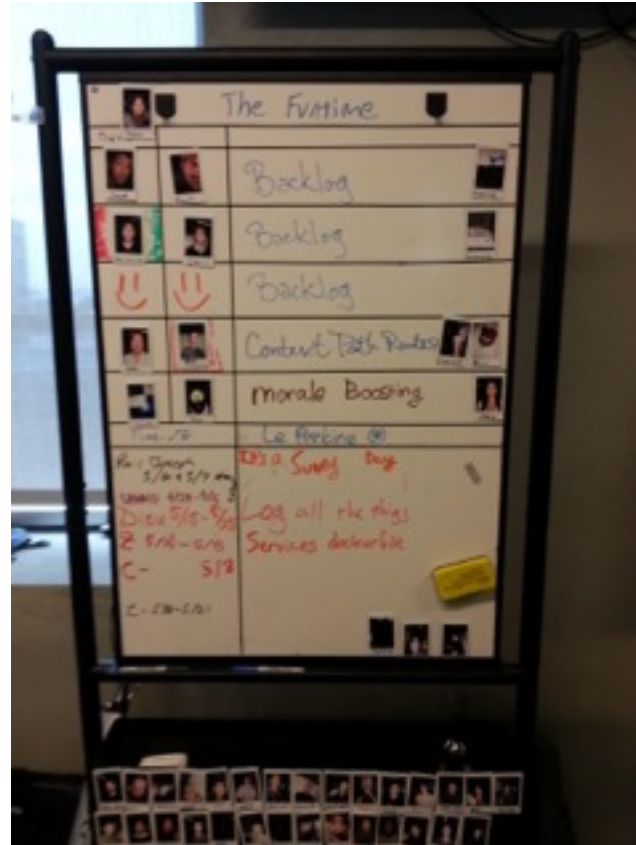

Overview

- Development Process
- Collaborating With Other Teams
- CI/D
- Community Interactions
- Contributing
- Q&A

Development Process

- Standup
- IPM
- Pairing
- Testing
- Dev Ops
- Retro

Collaborating With Other Teams

- Google hangouts
- Interrupt pair
- Slack
- Phone
- Changes made via PR or direct commit

Continuous Integration

- Pre-Staging environments
- Staging
- Smoke/Stress testing
- Environment differences
- Trust in the CI

Community Interaction

- Tracker Triaging
- Community Pair
- Sources
 - Github pull requests/issues
 - Mailing lists
 - Foundation requests placed in tracker

Contributing Issues

- The mailing list
- Github issues
- What it takes for us to address issues
 - Logs
 - Manifests/Deployment details
 - Caution

Contributing Code

- What it takes to have your PR merged
 - Why you made the changes
 - Is it tested/did you run acceptance test
 - Is is generally applicable
 - What could this possibly break

Any Questions
